

Build AI-Powered Applications Even If You've Never Coded Before

The Future is AI

Artificial Intelligence is transforming the way software is developed.

In the past, building applications required years of coding experience and large development teams. Today, powerful AI tools can assist developers in

writing code

launching applications

building features

faster than ever before.

Your Path to Building **with AI**

At Delta AI Academy, we make AI development simple and accessible for beginners.

During the program,
you will build real applications such as:

- AI Portfolio Website with modern UI and live deployment
- Booking Application with user login and booking management
- E-Commerce Application with product listing, cart, and order system

What You Will Learn

AI-Powered Full Stack Development

Learn how to build modern web applications using React.js and AI-assisted coding tools.

Mobile App Development

Create mobile applications using React Native so your apps can run on smartphones

Backend Development

Build backend APIs using Python FastAPI to handle logins, bookings, and application logic.

Database Integration

Learn how to store and manage application data using MongoDB Atlas Cluster.

Real Application Deployment

Deploy applications to production using platforms like:

- 🐙 Vercel
- 🐙 Hostinger VPS
- 🐙 Cloudflare

You will also learn version control using GitHub.

AI Tools You Will Use

Modern developers use AI tools to build faster and more efficiently.

During the program, you will work with tools such as:

Emerging ai development tools

Lovable

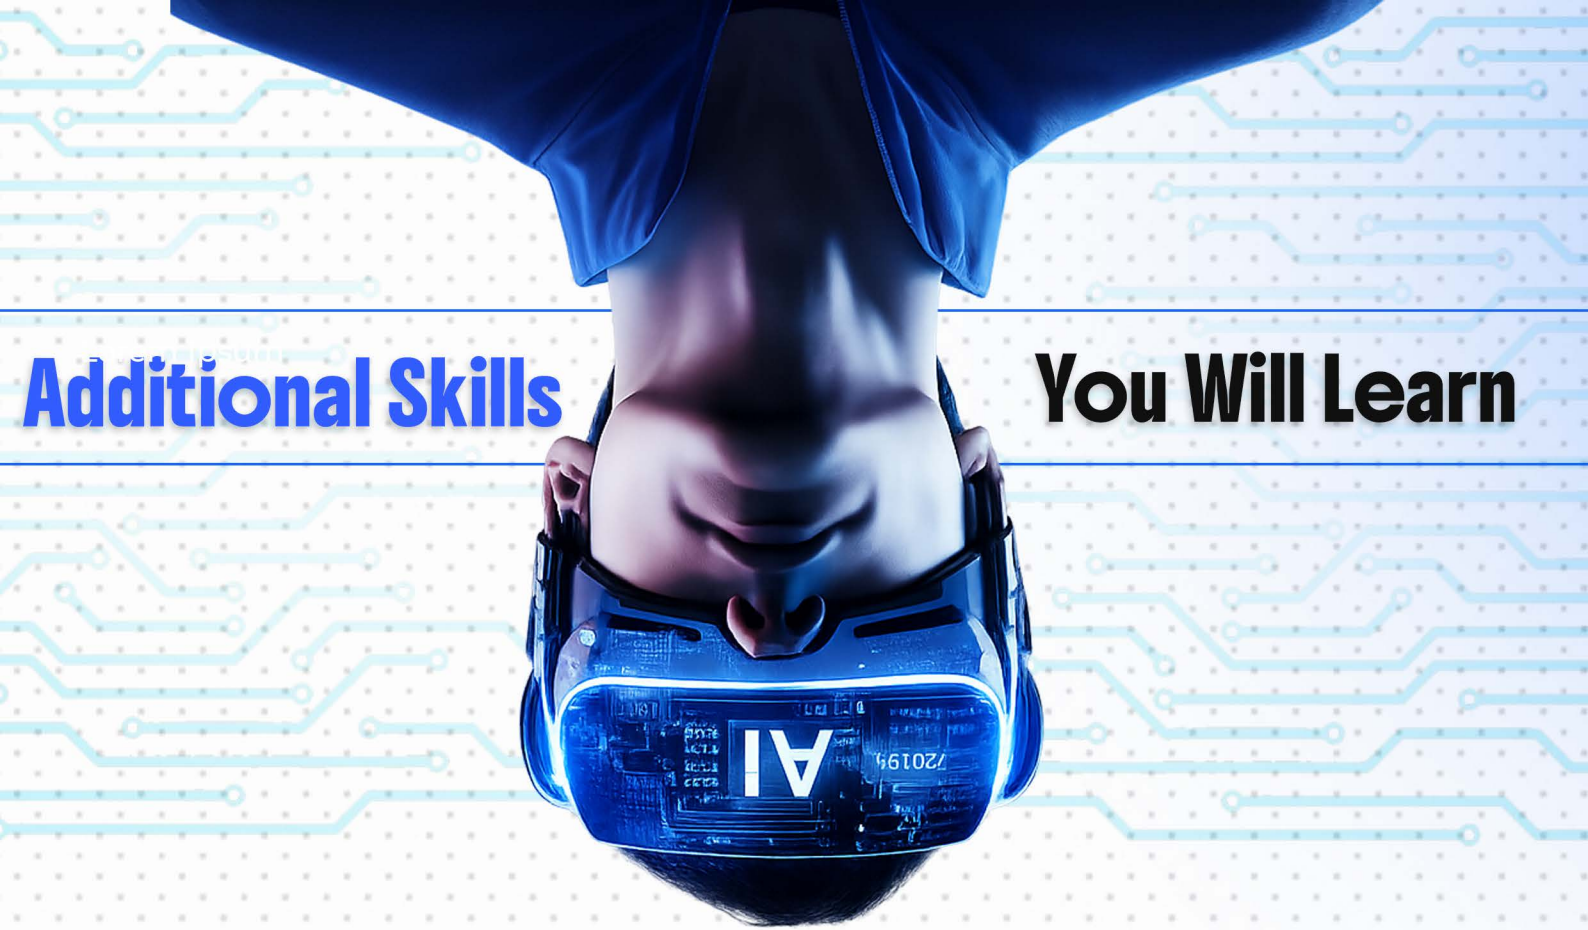

ChatGPT Codex

Claude

Google AI Studio

You will also explore AI productivity tools including:

- ✦ Whisper / WhisperFlow for speech-to-text workflows
- ✦ AI research and summarization tools
- ✦ AI automation tools that speed up development tasks

Additional Skills

You Will Learn

You will also understand important AI concepts including

- Prompt Engineering frameworks (Task – Context – Instruction)
- Fundamentals of Large Language Models
- Context windows and tokens
- Building real projects without complex coding

These skills help you use AI effectively while building applications

Why Choose Delta AI Academy

Hands-on learning with real projects

- Beginner-friendly guidance
- Industry AI tools used by modern developers
- Portfolio projects you can showcase
- Production-level deployment training

Our focus is to help you build real applications, not just learn theory

What You Will Achieve

After completing the program, you will:

- Build real web and mobile applications
- Understand AI-powered development
- Create portfolio projects

Learn how to deploy applications online
Gain confidence to build your own ideas

The future belongs to people who build and innovate.
